

## ScanPro 1000 Features and Benefits

- 1. Desktop, compact microforms scanner.**  
Fits almost anywhere, takes up about as much desktop space as two sheets of letter paper.
- 2. Works with all types of microforms.**  
The ScanPro 1000 works with all microforms: Fiche, 16mm roll film, 35mm roll film, cartridge film, ultra fiche, micro books, micro opaques, aperture cards.
- 3. Built specifically for the rigors of public use applications.**  
Heavy gauge metal throughout, all moving parts have steel bearings for smooth, sturdy performance. No external brackets, adjustment arms, lens adjustments, or switches are exposed to the public. To accommodate the expectations of today's users, operational controls are located on the view screen for consistency and ease-of-use.
- 4. On screen help.**  
On screen help is available to the operator for all of the toolbar control buttons.
- 5. Single zoom lens covers 7x to 54x (true optical zoom, not digital zoom).**  
Integrated design so there is no changing of lenses when changing film types or magnifications, and there is no need to use additional or companion equipment.
- 6. Selectable resolution.**  
Select the resolution needed for any application 200, 300, 400, or 600 dpi.
- 7. High resolution 300 dpi scans in one second at all magnifications.**  
The ScanPro 1000 has the fastest scan speed of any "on-demand" scanner (these are NOT the low-resolution screen shots sometimes called instant scans or snap shots). A fast scan speed makes it possible to complete research and look-ups quickly and efficiently.
- 8. Low power consumption.**  
Uses less than 20 watts of power. LED illumination of film generates almost no heat to insure no film damage. Energy saver mode turns the scanner off when it is not being used or when the software is closed.
- 9. TRUE-View™ operation – What You See Is What You Get operation.**  
You always view your image at high resolution and you see any image adjustments that you make right on your viewing screen. And, when satisfied with what you see, that is exactly what you get when you scan, save, or print.
- 10. One CLICK magnifier to enlarge text and images.**  
Enlarge a selected portion of the view screen image at up to 500% and view the smallest details while seeing the original document as a reference. Or, you can enlarge the entire view screen image and "drag" to view.
- 11. Administrative control for customizing how the ScanPro 1000 will operate.**  
This is a password-protected screen that the administrator can use to select which features will be available to the operator. This makes it possible to select from the many available features only what will best get the job done and still keep the application simple. For example, you can have a reader, reader printer, a full featured research scanner, or anywhere in between.

- 12. Customizable toolbar with save and recall settings.**

After you have selected the features that you want for an application, give your “custom” setting a name, save it, and the next time that microform application is to be used, recall all of the “custom” settings with a single “click” (this is an administrative selection).
- 13. Multiple output capability – Laser print, e-mail, save to: USB pen drive, Hard drive, CD.**

The ScanPro 1000 has separate buttons to print to a laser printer (can be networked), save to a USB pen drive or USB hard drive, burn to a CD, save to the computer hard drive, or e-mail. And, since these are separate buttons, you can select which ones will be available to the operator (this is an administrative selection).
- 14. Select which file format will be used.**

The available file formats are PDF, JPEG, TIFF, TIFF compressed, TIFF G4, Multi page PDF, multi page TIFF (all formats). The administrator can select the file format that will be used or choose to let the operator make the selection.
- 15. Automatic controls for microforms.**

Automatic controls: focus, brightness, contrast, straightening, cropping, and “one click” image adjustment.
- 16. Automatic controls for microfilm.**

Automatic roll film controls: image advance, image framing, automatic film rewind.
- 17. Secure screen mode.**

The administrator can elect to “lock down” the view screen and ScanPro 1000 software so that the operator cannot access the desktop and use other programs. This is sometimes called the kiosk mode or secure screen mode.
- 18. Remote access.**

The ScanPro 1000 can be operated from a remote location using a computer with internet access running commercially available “remote access software”.
- 19. No charge software updates.**

All updates to PowerScan™, the ScanPro 1000 software, are available as a no charge download from the e-ImageData web site throughout the life of the product.
- 20. Automatic Scanning for roll film.**

The optional Auto-Scan™ plug-in software adds automatic scanning for roll film to any ScanPro 1000 with a motorized roll film carrier.
